

Chapter 11 BOMB DOOR

ILLUSTRATION

Fig

Bomb door position indicator
(pre-Mod 1531) 1

1. The bomb door circuits on this aircraft are identical to those described in A.P. 101B-1202-1B, Cover 1, Sect. 6, Chap. 11, except that on aircraft with serial numbers XV 352 and XV 863 to 869 inclusive — which embody Mod 1193B — the door closed microswitch B-DU (fig 1) also controls an interlock circuit in the Linescan installation (Sect. 17, Chap. 5).

Note...

Embodiment of Mod 1531 returns the aircraft to a pre-Mod 1193B state.
