

## Chapter 6 IFF INSTALLATION

1. The IFF installation on this aircraft is similar to that described in AP 101B-1202-1B, Cover 2, Sect 9, Chap 6 except that with Mod 1441 incorporated, provision is made for routeing suppression pulses during transmission to the Martel AR blanker unit (Mod 1352) (Sect 20, Chap 5).

2. When IFF is transmitting, suppression pulses are routed via junction box R-EN to the Martel AR blanker unit and converted into a suitable signal for blanking the acquisition circuits of the AR missiles. Wiring details are in Section 19 of the SDM (AP 101B-1202-10B).
