Chapter 2

INSTRUMENT INSTALLATION

LIST OF GROUPS

| <i>Group</i> | <i>Group</i> | <i>Group</i> |
|---|--|--|
| GENERAL INFORMATION - 1 | <i>Oil pressure gauge and tachometer ... 2C</i> | <i>Mechanically operated flight instruments ... 3D</i> |
| <i>Installation details 1A</i> | | |
| <i>Removal of instrument panels 1B</i> | | |
| <i>Location of equipment 1C</i> | | |
| ENGINE INSTRUMENTS - 2 | FLYING INSTRUMENTS - 3 | ARMAMENT INSTRUMENTS - 4 |
| <i>Fuel content gauges and fuel pressure warning 2A</i> | <i>Integrated flight instrument system (full) with TACAN and standby instruments. 3A</i> | <i>Gyro gun sight and camera recorder ... 4A</i> |
| <i>Exhaust gas thermometer and top temperature control 2B</i> | <i>Electrically operated flight instruments 3B</i> | MISCELLANEOUS INSTRUMENTS - 5 |
| | <i>Air pressure operated flight instruments 3C</i> | <i>Gauges and indicating instruments ... 5A</i> |

Note . . .

A list of contents appears at the beginning of each group.

Introduction

This chapter contains a description of the various instruments installed in this aircraft, together with the necessary servicing information required to maintain the installation in an efficient condition. The chapter is divided into a number of self-contained groups of information, beginning with general information groups covering

the instrument installation as a whole and embodying installation details, general servicing, location of equipment and the removal of the instrument panels. The remaining groups each appertain to a particular collection of instruments as listed above. Each group embodies a description of the installation of the in-

struments concerned, including the necessary servicing information and wiring diagrams of the electrically operated instruments. For a detailed description on the standard components employed, reference should be made to the appropriate Air Publications quoted in the following groups.

A close-up, low-angle shot of an aircraft's internal wiring harness. The harness consists of numerous orange and white insulated wires, some of which are bundled together with black zip ties. The wires are installed in a metal channel within the aircraft's fuselage. In the upper left, a large, cylindrical component, possibly a motor or pump, is visible, with several wires attached to it. The overall environment is metallic and industrial.
