### BRIEF DESCRIPTION

The testmeter, Type Q, is a small multi-range testmeter for the measurement of a.c. and d.c. voltages, direct current and resistance. Range selection sockets at the top of the instrument and a selector switch on the front panel enable the ranges to be used. The meter is contained in a black moulded plastic case which is housed in a leatherette box having a hinged lid together with a pair of test leads fitted with plugs and crocodile clips. The movement consumes 1mA. for full-scale deflection.
