

**INSULATION RESISTANCE TESTER, TYPE E**

<i>Air Ministry Ref. No.</i>	...	...	...	5G/427
<i>Admiralty Pattern No.</i>				
<i>Dimensions</i>	...	...	...	8 $\frac{3}{4}$ in. $\times$ 5 $\frac{1}{2}$ in. $\times$ 6 $\frac{1}{4}$ in.
<i>Weight</i>	...	...	...	...
				7 $\frac{1}{4}$ lb

**BRIEF DESCRIPTION**

The insulation resistance tester, Type C consists of a hand-driven generator and a direct-reading ohmmeter contained in a metal case. The drive incorporates a centrifugal clutch which slips at a pre-set speed to provide a constant 500 volts testing pressure. The ohmmeter scale plate is calibrated in thousands of ohms and megohms from zero to infinity. The first marking after zero is 10,000 ohms and the last marking before infinity is 100 megohms.

The scale glass is protected by a hinged flap and the case is fitted with steel carrying handles.
