DESCRIPTION

2. A circuit diagram of the relay is given in fig. 1. The mechanism incorporates an electro-magnet mounted centrally on the base; when the coil is energized, the armature is attracted to the core to close the contacts.

3. Electrical connection to the coil and the contacts is made to screw type terminals, 6 B.A. for the coil and 4 B.A. for the contacts. Two mounting flanges are provided, each with a single fixing hole.
