<i>Weight (cased)</i>	...	...	...	...	...	7 lb. 10 oz.	
<i>Associated publication</i>	A.P.4343G, Vol. 1, Sect. 15, Chap. 13						

BRIEF DESCRIPTION

The probe illuminating torch is designed to facilitate the examination of components which are concealed from direct vision or are located in places to which access is difficult.

The assembly consists of a cylindrical case, housing two 1·5 volt dry batteries, to which is attached a 15 in. flexible probe having a 2·5 volt lamp screwed into a boss at its remote end. Three mirrors of different sizes are provided and each may be fitted, by means of a clip, to the lamp boss to direct the light for use as an inspection mirror. A 15 in. probe extension is also included in the assembly.
